S.No	EXPERIMENTS	Page No
1	Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.	1
2	Assuming a set of documents that need to be classified, use the naive Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.	2
3	Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.	4
4	Implement an algorithm to demonstrate Polynomial Classifier.	6
5	Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.	8
6	Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.	10
7	Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	12
8	Implement an algorithm to demonstrate Decision Tree Classifier.	13
9	Implement an algorithm to demonstrate the significance of Genetic Algorithm in python.	15
10	Case Study: Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, with different classifier algorithm	18
